Making Utah and California greener

In the United States, Skanska has developed systems for making data centers more energy-efficient. In collaboration with eBay, Skanska has created a modern new facility outside Salt Lake City, Utah (lower photo) that sharply reduces eBay's environmental impact. Skanska is also working with other customers to make their existing computer facilities more energy-efficient.

In Sacramento, Skanska has a design/build contract for an extensively renovated 7,000+ sq. m (78,000 sq. ft.) central utility plant (upper photo). It will serve numerous state office buildings in the California capital. One purpose of the renovation is to save energy, for example by using a large underground tank for storing and reusing water for heating and cooling, respectively.

Annual Report production team:

Skanska AB in collaboration with Addira and IMS Consulting
